

My name is **Mert Ayranci**, and I am currently a second-year student in the BSc Computer Science with Management & a year in industry program at **King's College** London. I am interested in pursuing an internship that aligns with my passion for technology.

Before King's College London, I graduated from Lycée Bilingue Francophone St. Joseph in Istanbul, where I developed strong analytical skills and consistently maintained high academic performance.

At university, I have undertaken modules such as Software Engineering Group Project (focusing on **Python and Django**), Practical Experience of Programming (**focusing on C++, Java and Scala**), **Foundations of Computing, Database Systems (focusing on SQL)** and **Git** etc.

I am **excited by the prospect of an industrial year/summer internship** that will build upon both **my theoretical knowledge and hands-on experience**.

I am particularly interested in an internship **focused on software development, data analytics, or cybersecurity projects**.

With my passion for technology and success, along with my strong teamwork, and adaptability skills, I believe I can contribute significantly to your company.

I can fluently speak, English, French and Turkish and have deep understanding those cultures which allows me to adapt and communicate in various environments, on the other hand I can say with proud that my grades are always consistent.

My availability for industrial year or **summer internship starts at 1 June 2025**.

Thank you in advance for considering my application.

Sincerely,

Mert Ayranci
